Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-4, are rejected under 35 U.S.C. 103(a) as being unpatentable over Li U. S. Patent No. 6,334,240 in view of Parker U. S. Patent No. 936,156.

Li discloses the general combination claimed of a strap length adjusting device comprising .a main body (10) having a vertical hole and a horizontal hole formed therein (12,13) and a strap overlapped itself and inserted through the vertical hole (12) and pulled out through the horizontal hole including a partition member (20) inserted through one of said holes for preventing the strap from pulling out of

Art Unit: 3677

said main body; see Figures 6, 7; column 4, lines 24-33, except that the reference to Li does not discloses a groove in the main body and the plate-type insert having convex shape groove formed at each side thereof. Parker teaches the use of a rope adjuster device comprising a plate-type insert having convex shape groove (b) formed at each side thereof and its main body provided with concave shape groove (a) formed at each side of its main body; see Figures 1-3; page 1, column 1, lines 30-48. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the insert in Li, by forming a plate-type insert having concave grooves and its main body having corresponding convex grooves for releasably securing the strap in said main body in the manner taught, disclosed and suggested by Parker; especially, since such modification involves only routine skill in the art.

Furthermore, Applicant is reminded that in considering the disclosure of a reference, it is proper to take into account not only specific teaching of the reference but also the inferences which one skilled in the art would reasonably be expected to draw therefrom; see In re Preda, 401 F2d 825, 826, 159 USPQ 342,344 (CCPA1968).

Furthermore, the particular location and/or the arrangement selected of an elements is also considered to be no more than an obvious matter of design choice to one having ordinary skill within the art, especially, since it has been held that rearranging pa an invention is involves only routine skill in the art. See In Re Japikse, 86 USPQ 70.

Claims 5 and 6, are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Applicant's attention is directed to the art cited herein, as showing structure related to Applicant's disclosed invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to VICTOR N SAKRAN whose telephone number is 703-308-2224. The examiner can normally be reached on 6:30 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, J. J. swann can be reached on 703-308-4115. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
